Sir:

In response to the Interview Summary dated May 16, 2006 in the above-identified patent application, applicants have the following comments:

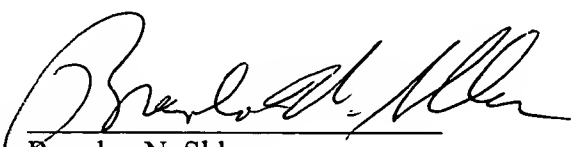

The Interview Summary implies that the claimed invention requires that the user selected information segments be "selected and stored in the buffer in real-time." While in a disclosed

embodiment, selected information segments are stored in a sequence in a buffer immediately upon selection of the segment, which may be referred to as “real-time,” none of the independent claims 1, 20, 32, 46, 65, or 66 requires such real time operation.

In any case, U.S. Patent No. 6,263,507 (“Ahmad”) does not teach or suggest the respective combinations recited in independent claims 1, 20, 32, 46, 65, and 66, as discussed in the Amendment dated May 16, 2006.

Respectfully submitted,
Kaye Scholer LLP
